Definition (section 2.3 of Let S be a Noetherian local ring and I and $I^{\prime }$ ideals in S. We say $I^{\prime }$ is a complete intersection if S has a free presentation: $$I^{\prime } \cong S^{\oplus r} \oplus J \oplus K,$$ and J and K are both generated by $r-1$ elements. Moreover, we say S has a regular element if S has a regular element that is not in the ideal (0). Questions Do we know when $I^{\prime }$ is a complete intersection? When can one use a regular element to compute $I^{\prime }$? Is this question even well-defined? A: The ring S always has regular elements, one for each maximal ideal, and since no maximal ideal contains a regular element, all maximal ideals have the same regular elements, and the question has an unambiguous answer. 1. Field of the Invention The present invention relates to a lens driver circuit. More specifically, the present invention relates to a lens driver circuit for driving a movable lens of an optical apparatus such as a still camera, a video camera or a telescope. 2. Description of the Related Art A lens driver circuit is disposed in a lens barrel of an optical apparatus such as a still camera or a video camera. The lens driver circuit drives a movable lens of the optical apparatus to move in a direction parallel to the optical axis of the optical apparatus so as to vary the focal distance. A lens driver circuit of the type referred to above is disclosed in, e.g., Japanese Patent Laid f678ea9f9e
